BASIC LAWN CARE PROGRAM

Full Year with Seven (7) Treatments

FERTILIZER: Properly timed granular feedings to promote thick, vibrantly green grass with a vigorous root system.

LIME: High calcium, limestone applied to balance acidic soils

CRABGRASS CONTROL: Early spring crabgrass application to create a pre-emergent barrier, and prevent crabgrass from invading your lawn.

WEED CONTROL: Ongoing tailored applications to get rid of over 40 common lawn weeds including dandelions, plantain, chickweed, and clover.

LAWN INSECT CONTROL: Applications to clear out destructive chinchbugs, sod webworms and other turf damaging insects as needed throughout the year.

FUNGICIDE FOR BROWN PATCH: This fungus is a soil borne-organism which attacks grass during periods of high humidity and moderately high temperatures.

AERATION: Greatly improve your soil's structure and ability to grow a quality lawn. Annual aeration treatments reduce thatch build-up and improves lawn density.
